

Kaydon **infinite**[®]
bearing solutions
for Challenging Applications

Diverse solutions for demanding designs

It takes more than quality and performance for a bearing to meet today's demanding design requirements. It takes truly innovative thinking, based in real-world experience. At Kaydon Bearings, that's just the beginning.

Kaydon Bearings offers:

- a wide range of bearing configurations and sizes
- standard and custom designs
- uncompromising precision and reliability
- success in hundreds of applications

- comprehensive technical support
- a 70-year commitment to customer satisfaction

At Kaydon, we specialize in meeting challenges to ensure product success. If you could use that sort of help, give us a call.

Thin Section bearings

Real-Slim® thin section bearings are known for saving designers critical space and weight. They feature a cross-section that remains constant as the bore diameter increases, providing more dynamic capacity and longer life than standard bearings. This constant cross-section is especially valuable when you're designing a product to be manufactured in a variety of sizes.

Kaydon offers the industry's most comprehensive range of thin section bearings. Bore sizes range from 1" to 40" (25mm to 1m) and cross-sections from .187" x .187" to 1" x 1" (4.75mm to

25mm). Here is a summary of the styles available to solve your design problem.

- Radial
- Angular
- 4-point contact
- Metric
- Open
- Sealed
- Ultra-Slim® bearings
- Extra-light versions
- Stainless steel
- Corrosion resistant
(e.g. Endurakote® plating)
- Duplexed face-to-face

- Duplexed back-to-back
- Ground for universal duplexing

Most of these can be provided with modifications, such as custom preload or internal fit, precision class upgrades, custom lubricants, and duplexed sets.

Real-Slim® bearings have saved space and weight in countless applications since Kaydon introduced the concept in the 1940s. Let us show you how they can solve your application challenge. You'll find specifications, performance data and more in our Catalog 300, available in print, or as a PDF file at www.kaydonbearings.com.

Kaydon **infinite**[®] bearing solutions

Slewing Ring bearings

Kaydon slewing ring bearings transmit and rotate heavy loads precisely and reliably, in diameters of up to 20' (6.1m) and configurations to suit almost any application.

4-point contact ball bearings carry radial, axial and moment loads simultaneously and have integral seals to resist contamination.

8-point contact ball bearings provide up to 80% more load capacity than 4-point contact bearings, with many of the same features.

Cross-roller bearings offer exceptional stiffness with low rotational torque, in a smaller envelope than you might expect.

3-row roller bearings share the thrust, radial and moment loads between the rows, resulting in the highest capacity for any given diameter.

WireX[®] wire race roller bearings optimize space, weight and corrosion resistance with wire raceways in lightweight support rings. They work well with non-rigid and out-of-flat mounting structures.

For slewing ring specifications, ratings and application guidance, please consult Kaydon's Catalog 390. We'll be happy to send you a copy, or you can download a PDF file at www.kaydonbearings.com.

Other Bearings

KT tapered roller bearings provide Kaydon's familiar space and weight saving advantages in applications requiring a tapered design.

Cylindrical roller bearings provide very high radial load capacity where axial load is not as critical.

Proven in countless applications

Applications	Thin Section Bearings	Slewing Ring Bearings	Roller Bearings	Wire X®
Aerospace & Defense				
Camera mounts	■			
Gimbals/gimbal assemblies	■			
Instrument mounts	■			
Radars (fixed and mobile)	■	■		■
Satellite and radar antennas	■	■		
Security camera mounts	■			
Telescope bases	■	■		
Truck mounted communication equipment	■			
Aircraft (Jet fighters, Helicopters, UAVs, Airlift & Cargo, Commercial)				
Counter-measure systems	■			
De-icing sliprings	■			
Gatling gun bearings	■			
Landing wheels			■	
Mast, swash plate and gearbox bearings	■		■	
Navigation, target acquisition pods/FLIRS	■			
Propulsion and control systems	■		■	
Refueling booms, winches, APUs	■			
Rescue hoists	■			
Ships				
Carrier elevator and arresters		■	■	
Missile defenses	■	■

More reasons to specify Kaydon Bearings

1. Decades of diverse experience

Kaydon has been helping customers develop optimum product designs for seven decades, inventing the thin section bearing and pioneering a variety of innovative approaches. Our product engineers have a combined 300 years of experience (250 of them bearing-specific), and are as proficient in application engineering as they are in design engineering.

2. Highest quality standards – All Kaydon bearings are designed to demanding specifications and manufactured with the highest-

quality materials and processes. Key certifications include ISO 9001:2008, AS9100B, NADCAP, and various customer requirements.

3. Comprehensive technical support – The Kaydon R&D facility is home to the latest testing equipment for torque, vibration, sound, environmental effects, and more. You'll find 3-D CAD drawings and design software at our website. And should you ever need service, it's available in North America from our headquarters and overseas from qualified local distributors.
